**POSSIBLE AMENDMENTS FOR EXAMINER'S AMENDMENT**

(Serial No.09/607,839) Examiner: J. Bret Dennison (fax 571-273-3910) (Atty Docket No.14531.70)

1. (Currently Amended) In a server included in a network that also includes a client associated with specified attributes, a method of using a decision engine to create a document for use by the client, the document being customized according to the specified attributes associated with the client, the method comprising the acts of:

receiving a request for a document at a server application, the server application being configured to generate the document from a script;

the server application generating a request for a decision engine, which is separate from the server application, to select content for the document ~~based on at least one attribute of the client~~, and without specifying either ~~the at least one attribute of the client or how the selection of content is to be made~~ and without specifying an attribute that is used by the decision engine to select the content;

the server application receiving from the decision engine an identification of the content that has been selected by the decision engine;

the server application creating the document and incorporating into the document the content that has been selected by the decision engine; and

transmitting the document to the client.

Claims 9 and 27 should be OK without amendment because they don't include language that can be interpreted to suggest that the server specifies the attribute (as could the language in claim 1). However, these claims can be amended to get rid of an extra space at the end of the limitation in question, just before the semicolon, as shown below.

9. ...

only upon processing a first portion of a script associated with the document, issuing to a decision engine, that is separate from the server application, a request for the decision engine to select a second portion of the script, wherein the selection of the second portion is based on at least one client attribute that is identified by the decision engine and that is not included with the request or script-;

...

27. ...

only upon processing a first portion of a script associated with the document, issuing to a decision engine, that is separate from the server application, a request for the decision engine to select a second portion of the script, wherein the selection of the second portion is based on at least one client attribute that is identified by the decision engine and that is not included with the request or script-; and
